

Child and Youth Homelessness in California

Public School Students Recorded as Homeless: 2021

Locations	Percent
California	3.8%
Alameda County	1.5%
Contra Costa County	1.4%
Fresno County	1.8%
Kern County	2.4%
Los Angeles County	3.6%
Orange County	5.3%
Riverside County	4.0%
Sacramento County	3.5%
San Bernardino County	6.5%
San Diego County	3.8%
Santa Clara County	1.4%

Definition: Percentage of public school students recorded as being homeless at any point in the school year (e.g., 3.8% of California students were homeless at some point during the 2021 school year).

Data Source: California Dept. of Education, [Coordinated School Health and Safety Office](#) custom tabulation & [DataQuest](#) (Feb. 2023).

Public School Students Recorded as Homeless, by Type of Nighttime Residence: 2021 California

What It Is

Kidsdata.org presents the number and percentage of public school students recorded as being homeless at any point during a school year, by grade level, and by nighttime residence.

Kidsdata.org also presents the number of unaccompanied children and young adults ages 0-24 found to be homeless during the national point-in-time (PIT) count of homeless individuals.

Why This Topic Is Important

On a January night in 2022, 171,521 people living in California (44 per 10,000) were identified as homeless, including 9,520 unaccompanied young people under age 25—the highest figures among U.S. states. On this night, California accounted for 30% of the nation's overall homeless count and 32% of homeless unaccompanied youth. Over the previous calendar year, 2021, an estimated 268,263 Californians received services from public homelessness programs, including 25,182 unaccompanied youth.

During the 2020-21 school year, 3.8% of California's school-aged children were recorded as homeless—not including young children who were not enrolled in public preschool, students who experienced homelessness during the summer only, or those who had dropped out of school; the number of homeless students in California (around 230,000) also was the highest in the nation, representing more than 1 in 5 U.S. public school students recorded as homeless that school year.

Homelessness at any point in a young person's life can cause severe trauma, disrupt their cognitive and psychosocial development, and put their health and safety at risk. Homeless children are more likely than others to experience hunger and malnutrition, physical and mental health issues, and academic problems. Many of these children and youth are exposed to mental illness, substance abuse, family instability, domestic violence, or deep poverty before becoming homeless, and homelessness increases their vulnerability to additional trauma. For example, homeless youth are vulnerable to exploitation, physical and sexual victimization, and other harmful experiences.

Some adolescents and young adults are at heightened risk for homelessness, such as African American/black and Hispanic/Latino youth, those who identify as LGBTQ, child

Definition: Number of public school students recorded as being homeless at any point in the school year, by type of nighttime residence (e.g., 8,020 California students were homeless and unsheltered at some point during the 2021 school year).

welfare- and juvenile justice-involved populations, youth with disabilities, English learners, and young people who are pregnant or parenting.

How Children Are Faring

In California, 229,288 public school students—3.8% of all enrollees—were recorded as experiencing homelessness at some point during the 2020-21 school year. These figures are down from 2016-17, when 298,914 public school students (4.8%) were reported to be homeless. At the county level, rates of student homelessness in 2020-21 ranged fewer than 1 in 75 to more than 1 in 8.

Statewide, around half of homeless public school students in 2020-21 (47%) were enrolled in Pre-Kindergarten through Grade 5, while 22% were in Grades 6-8 and 31% in Grades 9-12. Overall, the most common type of nighttime residence among homeless students was in shared ('doubled up') housing with friends or relatives (85%).

During the 2022 homeless point-in-time (PIT) count, 9,590 children and young adults ages 0-24 were found to be homeless and unaccompanied in California, down from 14,161 in 2013. Most of these homeless young people (6,762) were unsheltered, meaning their nighttime residence was a place not ordinarily used as regular sleeping accommodation. The vast majority of unsheltered children and young adults were transitional age youth ages 18-24 (6,448), but a substantial number of unsheltered unaccompanied minors were identified as well (314).
